

## Chellaram Shipping

Chellaram Shipping headquartered in Hong Kong and operating a modern fleet of 10 vessels is well-known for its emphasis on quality ship management. In keeping with its preamble of continuous improvement, Chellaram Shipping adopted the Ulysses Task Assistant Safety and Quality Solution and the Ulysses' Performance Reporting Tool for its offices and entire fleet of ships.

*"It is clear that the Task Assistant is designed keeping practical user requirements as the primary focus. Implementation and deployment of the system across our fleet has been achieved independently, with minimal training effort. We chose the product as a means for improving the ease of usage and enhancing familiarity with our Safety management System for our floating staff. This is in keeping with our declared goal of making our fleet Safer@sea."* declared Capt. Amit Bhargava, Marine Manager who is the administrator for the Ulysses products at Chellaram Shipping.

Task Assistant is developed and supported by Ulysses Systems, a leading provider of innovative business intelligence solutions to the maritime and other industries. Ulysses provides solutions based upon advanced telecommunications and information systems technologies that help people work intuitively without special software training. Ulysses' product design has at its core an understanding of how human beings perceive and process information, delivering systems that work the way people do and making information processing fundamentally more efficient.
